

Technologies for Air Pollution Monitoring, Prevention & Control

March 30, 2007

Abstract:

This report contains: An overview of the air pollution mitigation industry, including definitions, historical information, market trends and growth patterns, and detailed information about market drivers; Current and forecasted data for the industry to 2012, detailing sectors such as detection, control, and prevention; A review of important technologies like noxious air monitors, gas and smoke analysis, non-dispersive infrared analyzers (NDIA), gas chromatography, ozone detection, and radiation meters; An analysis of important patents and company profiles.
